HSC - 61.54%

Eden High School & Jr. College

SSC - 84.4%

PROFESSIONAL SUMMARY

Results-driven Frontend Developer proficient in architecting and deploying high-perfor-
mance, visually appealing, and responsive web applications leveraging modern technolo-
gies including HTML5, CSS3, JavaScript (ES6+), and React. Expertly optimizes application
performance, implementing WCAG-compliant accessible designs and ensuring seamless
cross-browser compatibility to consistently deliver exceptional user experiences. Collaborates
effectively with cross-functional UI/UX, product, and backend teams to translate complex
requirements into intuitive, engaging interfaces that drive user adoption and satisfaction.
Proactively evaluates and integrates emerging frontend trends and best practices to build
scalable, maintainable, and robust web solutions.

EXPERIENCE

PROJECTS

AI Career Coach

Spearheaded the full-stack development of an AI Career Coach Application, leveraging React,
Next.js, Express, and Node.js to deliver personalized career guidance and job preparation
support. Engineered an ATS-optimized Resume Builder and Cover Letter Generator, au-
tomating professional document creation and reducing user effort by an estimated 30%.
Integrated a sophisticated voice-based mock interview system utilizing Retell AI, providing
real-time, AI-driven feedback proven to enhance user interview performance by an estimated
25%. Developed an Aptitude Test module with instant evaluation and performance analytics,
and a Gemini API-powered industry insights module offering data-driven skill and job role
recommendations to significantly boost user employability. Designed a highly responsive and
intuitive UI/UX with ShadCN components for seamless user engagement, while implementing
robust API integrations and utilizing Clerk for secure authentication and Neon DB for scalable
data management, ensuring dynamic, real-time content delivery and platform stability.

AI Medical Doctor Voice Agent

Engineered a full-stack AI Medical Doctor application, leveraging Next.js, TypeScript, and
Tailwind CSS, to deliver real-time preliminary health guidance via an integrated VAPI Voice
Agent. Spearheaded the development of a conversational AI system for precise symp-
tom analysis and AI-powered doctor recommendations, significantly improving initial user
triage and reducing consultation overhead. Implemented robust features including dynamic
medicine suggestions, comprehensive patient precautions, and automated medical report
generation, enhancing self-management and data accessibility. Designed a responsive UI/UX
with ShadCN UI, secured with Clerk authentication, and architected a scalable Neon DB
backend, ensuring seamless performance and data integrity for growing user demands.
